The focus of the present edition has been to further consolidate the information on the principles of plant systematic, include detailed discussion on all major systems of classification, and significantly, also include discussion on the selected families of vascular plants, without sacrificing the discussion on basic principles. The families included for discussion are largely those which have wide representation, as also those that are less known but significant in evaluating the phylogeny of angiosperms. The discussion of the families also has a considerable focus on their phylogenetic relationships, as evidenced by recent cladistic studies, with liberal citation of molecular data. Several additional families have been included for detailed discussion in the present volume.

The fear of death may translate into the desire for longevity. However, longevity is a true blessing only if it is coupled with good health. Healthiness, in today's expectation, is not simply a disease free state. Rather, it is very much a state of wellbeing and competence, both physically and socially. While Oriental medicine emphasizes on the promotion of physiological balance and internal balance as an integral requirement for longevity, other cultures also have various sophisticated concepts and orientations. This book successfully collates all the different views and approaches from Austria, Russia, China and Japan in the exploration of Health, Wellbeing, Competence and Aging.

Excerpt from Outlines of Child Study: A Manual for Parents and Teachers It is a privilege to introduce to those unacquainted with it one aspect of the work of the Federation for Child Study. Of all the organizations which have sought to stimulate parents to study and know their children, the Federation has had probably the most experience. For over a score of years its leaders have been guiding the reading and discussion of groups of, parents and teachers, but especially of parents. Upon their experience are based these Outlines of Child Study. The arrangement is topical; and each topic is presented by (1) a statement of the general state of knowledge of the topic, (2) an outline which lists the detailed facts and problems concerning which there is information available, and (3) a list of helpfully graded references, ranging from attractive popular articles to technical monographs. The treatment is comprehensive, both in the topics chosen and in the outline and references for each. Especially valuable are the sections on concrete aspects of human behavior, such as Toys, Manners, The Use of Money, Pets and Plants, and Hobbies, which the ordinary manuals of Child Study have relatively neglected. The treatment is modern; mental tests, psycho-analysis and the conditioned reflex receiving due (some conservative critics may think, undue) attention, and recent work in all lines being considered.
