Academic Paper from the year 2018 in the subject Computer Science - IT-Security, grade: 10, , course: Master thesis, language: English, abstract: Modern web applications have higher user expectations and greater demands than ever before. The security of these applications is no longer optional; it has become an absolute necessity. Web applications contain vulnerabilities, which may lead to serious security flaws such as stealing of confidential information. To protect against security flaws, it is important to understand the detailed steps of attacks and the pros and cons of existing possible solutions. The goal of this paper is to research modern web application security flaws and vulnerabilities. It then describes steps by steps possible approaches to mitigate them.

Self-directed learning, while fairly common in adult education, is practically unheard of in primary and secondary education. The literature gives examples of schools that have successfully fostered self-directed learning in students. These students tend to become more motivated and eager to learn after becoming used to making choices about their education. This qualitative study looks at the Puget Sound Community School in Seattle and examines how students there respond to being in charge of what they learn and which classes they take. Six students and four staff members are interviewed. The findings show that students go through stages of adjustment as they become self-initiated learners. Being in charge makes them more motivated to learn and helps them find direction in life. Some of the potential drawbacks of self-directed learning are also touched upon. The study implies that it is practical and beneficial for students to make meaningful choices about their education.

Academic Paper from the year 2018 in the subject Business economics - Business Management, Corporate Governance, grade: 1, , language: English, abstract: Global outsourcing of jobs is one of the most debated topics in management studies over the years because of the increasing concerns on economics perspective, technological perspective, organizational perspective, political perspective, and strategic perspective. Research shows that the labour market abroad has been increasing over the years thus posing an economic challenge at home, and this is the reason why most of the firms both large and small outsource jobs for instance, professional services in the less expensive labour markets abroad. Most of the leading firms across the globe outsource most of the jobs for instance, professional services so as to achieve a competitive advantage. However, most of these firms are faced with the need to examine the long-term impacts on the business and the society (both pros and cons of global outsourcing of jobs) for competitive advantages. From an economic perspective, it is argued that cost consideration is the most prominent decision making factor in any organization as most of the managers aim at minimizing the cost of operation so as to achieve a competitive edge in the global market because the goods and services are made competitive in the global market. However, there are those who argue that global outsourcing of jobs results into permanent job loss home, and this has an impact on the society where these firms operate. That said, global outsourcing of jobs needs to be analyzed in details in order to examine the benefits and costs associated with it before making outsourcing options. The research paper will, therefore, analyze some of the pros and cons of global outsourcing of jobs which can be used by managers as they make their outsourcing options for competitive advantage in the global market.

The Pros and Cons of God's Destiny was written by a native Moroccan who grew up hearing these beautiful tales of ancient Berber tribes. The story in this book is very simple and concise for children, but with a profound religious philosophy of its inhabitants for adults. By nature, Man is very greedy. On the other hand, he or she is afraid of losing all the belongings that God has granted him. Most middle-class families are worried about whether they will be poorer or richer in the future. Ahmed is the spokesman of the lower middle-class families; he came up with a "crazy idea" of trapping God in order to find out about his future. Ahmed made a long journey which taught him that God judges people according to His Own Judgment, and not always according to what sounds logical to human beings. Whoever is grateful, Allah will give him more blessings, but whoever is arrogant and shows ingratitude, His punishment is serious indeed. Between the two extremes of Judgments, Allah is Merciful to those who are really willing to repent forever. The Pros and Cons of God's Destiny is a didactic story because it teaches children, as well as adults, that there are only two kinds of people: The grateful and the ungrateful to Allah, but sometimes there is such a small borderline between Hell and Paradise that no one knows who is really Blessed and who is Not ...! Nobody knows how to end up there...!

Seminar paper from the year 2013 in the subject Economics - International Economic Relations, grade: 2,0, University of applied sciences Frankfurt a. M., course: Advanced Business English, language: English, abstract: Globalization is one of the major topics and challenges of our time. It describes the process of the worldwide increasing interconnection of economy, politics, culture and environment. This compression affects individuals, society and institutions as well as countries. It can help to increase prosperity, social justice and global networking in order to make the world more equal. In the following seminar paper, the prime importance will be the look at the effects of globalization on the world economy in general. Despite the advantages of globalization, the negative side with all the disadvantages should not be neglected. Therefore, it is essential to look at the advantages and disadvantages that are created by globalization. The question is to ask, if globalization really has the force to make the world more equal and who are the winners or the losers of it ? The available seminar paper tries to answer that question with a critical analysis of the topic. Chapter two pays attention to the fact what globalization really is and tries to identify the major characteristics of globalization. Chapter three concentrates on the consequences and effects of globalization on the world economy. The fourth chapter tries to identify the advantages and disadvantages. The seminar paper ends with a short result in chapter five, providing a short summary of the whole theme.

Pros and Cons: A Debaters Handbook offers a unique and invaluable guide to the arguments both for and against over 140 current controversies and global issues. Since it was first published in 1896 the handbook has been regularly updated and this nineteenth edition includes new entries on topics such as the right to possess nuclear weapons, the bailing out of failing industries, the protection of indigenous languages and the torture of suspected terrorists. Equal coverage is given to both sides of each debate in a dual column format which allows for easy comparison. Each entry also includes a list of related topics and suggestions for possible motions. The introductory essay describes debating technique, covering the rules, structure and type of debate, and offering tips on how to become a successful speaker. The book is then divided into eight thematic sections, where specific subjects are covered individually.

Bachelor Thesis from the year 2008 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 1,2, Maastricht University (School of Business and Economics), course: -, language: English, abstract: 1. General introduction Up to now, it has always been the task of marketing to be close to the customer and to know how to reach him in order to ultimately increase sales of the company's product or service. This focus on customer acquisition is widespread among companies, and many companies consider this to be sufficient in order to survive in the business world. Nonetheless, a vital flaw of this common view is that there is more than just focusing all efforts on acquiring new customers - That is, convincing the customer that it pays for him/her to continue doing business with the provider, which is called customer retention. Enter Customer Relationship Management (CRM). Throughout this paper, the definition of a CRM will be equivalent to the interpretation by Payne and Frow (2005), who state that CRM is a strategic approach that is concerned with creating improved shareholder value through the development of appropriate relationships with key customers and customer segments (Payne and Frow, 2005a). In the 1990s, organizations recognized the need for not relying on customer acquisition all alone, and stressing the relationship with the customer became imperative in the business world's strategic orientation. Unfortunately, implementing CRM systems turned out to require more work than the plain desire to be chosen as a provider over and over again. A great source of uncertainty was the vague definition of relationship management itself. Another pitfall was how to establish a CRM system in an organization. As relationship management was not up to executives' expectations, many companies were disappointed by the results - And yet, there were companies that succeeded in implementing a CRM system. Taking a closer look a
