This reference is ideal for students who need support during their neuromusculoskeletal clinical practice in areas such as communication, clinical reasoning, examination and assessment. It is a vital source for understanding the role of mobilization and manipulation in helping to maximize the recovery, rehabilitation and functioning of patients with movement-related disorders. The principles of the Maitland Concept of Manipulative Physiotherapy are applied to each body region so as to guide the student through to the appropriate selection, application and progression of mobilization and manipulation techniques within the context of contemporary physiotherapeutic rehabilitation. A vital companion to the classic texts – Maitland's Vertebral Manipulation and Maitland's Peripheral Manipulation – which promotes a patient-centred approach to neuromusculoskeletal disorders. Learning objectives and self-assessment questions in every chapter enables students to reflect on their knowledge Case studies highlights key aspects of the concepts to clinical practice Clinical profiles for common neuromusculoskeletal conditions Techniques described and accompanied by over 500 images Picture key to identify types of examination, decision-making and techniques within the text

This text provides an overview of vocational rehabilitation (VR) practice, making it the perfect companion for students and practitioners with an interest in supporting people back to work and improving their sense of health and well-being. The book is divided into three parts: the first covers the policy context of VR in the UK, defining VR, outlining the development of national standards in the sector, and looking at issues such as the economy and worklessness, and the legal background. The second part examines models of VR practice and relevant standards. It explores the nature of developing services in the public and private sectors, illustrated by case studies from a range of disciplinary backgrounds. The final part presents a detailed introduction to the knowledge and skills required in providing a VR service, including consideration of the multidisciplinary processes and stages involved. Introduction to Vocational Rehabilitation includes numerous case studies and a dedicated chapter of issues and questions to aid reflection. Comprehensive and evidence-based, this is the first multidisciplinary textbook for students and practitioners from a range of backgrounds, including occupational therapy and health, physiotherapy, human resources, nursing, social work and health psychology.

A companion to the same authors' Caring and Communicating, which together offer a complete package to teacher and learner.

This is a book for practitioners working in community-based healthcare as well as educators of future practitioners and researchers exploring this practice field and for people with chronic disabilities and their families and carers. The book invites readers to re-think and re-shape the way that community-based healthcare is practised by practitioners and experienced/engaged with by clients/patients and their families and other carers. Based on a PhD study of therapeutic relationships in community healthcare settings in NSW, Australia, and on real-life experiences of practitioners, clients and clients' families and care givers, this book paints a rich picture of the lived experiences of these participants in community-based healthcare. It examines the issues and challenges they face and the ways they deal with these. Key themes identified across the book are: the value and nature of relationships in this unique healthcare setting, the importance of time and using it well, the way good teamwork facilitates good community-based, patient-centred healthcare, balancing autonomy and equality with healthcare quality, practice wisdom embodied in healthcare, and ways of improving healthcare in clients' own homes.

Clinical and Radiological Anatomy of the Lumbar Spine 5e continues to offer practical, comprehensive coverage of the subject area in a unique single volume which successfully bridges the gap between the basic science of the lumbar region and findings commonly seen in the clinic. Prepared by an author of international renown, Clinical and Radiological Anatomy of the Lumbar Spine 5e provides clear anatomical descriptions of the individual components of the lumbar region, as well as the intact spine, accompanied by a full colour artwork programme. Detailed anatomical descriptions are followed by an explanation of the basic principles of biomechanics and spinal movement together with a comprehensive overview of embryology and the influence of age-related change in the lumbar region. The problem of low back pain and instability are also fully explored while an expanded section on medical imaging completes the volume. Clinical and Radiological Anatomy of the Lumbar Spine 5e offers practical, validated and clinically relevant information to all practitioners and therapists working in the field of low back pain and will be ideal for students and practitioners of chiropractic, osteopathic medicine and osteopathy, physiotherapy, physical therapy, pain medicine and psychiatry worldwide. Presents a clear and accessible overview of the basic science relating to the structure and function of the lumbar spine Written by an internationally renowned expert in the fields of both clinical anatomy and back pain Describes the structure of the individual components of the lumbar spine, as well as the intact spine Goes beyond the scope of most anatomy books by endeavouring to explain why the vertebrae and their components are constructed the way they are Provides an introduction to biomechanics and spinal movement with special emphasis on the role of the lumbar musculature Explores both embryology and the process of aging in the context of spinal structure and function Explores mechanical back pain within the context of the structural and biomechanical principles developed earlier in the volume Extensive reference list allows readers seeking to undertake research projects on some aspect of the lumbar spine with a suitable starting point in their search through the literature Perfect for use both as an initial resource in undergraduate training in physiotherapy and physical medicine or as essential reading for postgraduate studies Greatly expanded section on medical imaging Increased elaboration of the regional anatomy of the lumbar spine Includes chapter on reconstructive anatomy, which provides an algorithm showing how to put the lumbar spine back together Presents an ethos of 'anatomy by expectation' - to show readers what to expect on an image, rather than being required to identify what is seen

This invaluable book is a concise companion to the ninth edition of Last's Anatomy, the leading anatomy text for trainee surgeons in Australia and New Zealand. The Companion guide summarises the relevant anatomy information of each section of Last's Anatomy, providing useful diagrams and prosection images that will answer immediate anatomy questions for time-poor students, and encourage them to dive deeper into the full version. Suitable for undergraduate and postgraduate medical, anatomy, physiotherapy and nursing students, the companion provides the key learning outcomes needed to pass the anatomy component of the General Surgical Science Examination, while providing an indispensable reference to support their work on the wards. Synopsis of the key learning outcomes contained within Last's Anatomy for quick and easy reference. Easy to follow key information and anatomical details, to assist with GSSE exam preparation. Colour diagrams and prosection images replicate GSSE questions. All anatomical details align with the 9th edition of Last's Anatomy and the GSSE.

How can classroom teachers effectively differentiate learning and teaching programs to provide for the needs of every student in their class? This best-selling text begins by asking "Why include all students?" in regular classrooms and then shows how this can be done. It outlines the philosophy of inclusive education and focuses on the use of individualised planning and effective teaching practices to maximise learning outcomes within positive and productive environments. Vignettes and narratives provide real-life examples that help put the theory in context. This fifth edition includes broader coverage of issues to do with diversity and individual differences, particularly cultural and multicultural inclusion, linguistic diversity and giftedness. There is more throughout on the universal design for learning framework and on partnerships with families, while new pedagogical features encourage readers to reflect. Throughout, it emphasises a practical, research-based approach to teaching that can be applied to support students with a range of differences and additional needs.
