The Succession A Magnus Short Story Atlantic Books

This book is the first to compare Denmark and Portugal systematically in the High Middle Ages and demonstrates how the two countries became strong kingdoms and important powers internationally by their participation in the crusading movement. Communication in the Middle Ages was better developed than often assumed and institutions, ideas, and military technology was exchanged rapidly, meaning it was possible to coordinate great military expeditions across the geographical periphery of Western Europe. Both Denmark and Portugal were closely connected to the sea and developed strong fleets, at the entrance to the Baltic and in the Mediterranean Seas respectively. They also both had religious borders, to the pagan Wends and to the Muslims, that were pushed forward in almost continuous crusades throughout the centuries. Crusading at the Edges of Europe follows the major campaigns of the kings and crusaders in Denmark and Portugal and compares war-technology and crusading ideology, highlighting how the countries learned from each other and became organised for war.

"This commentary pays close critical attention to Dio's historical sources, methods, and assumptions as it also strives to present him as a figure in his own right. During a long life (ca. 164-after 229), Dio served as a Roman senator under seven emperors from Commodus to Severus Alexander, governed three Roman provinces, and was twice consul."--BOOK JACKET.

Located at the southwest corner of Lake Turkana in northern Kenya, Lothagam represents one of the most important intervals in African prehistory. Early human remains are restricted in distribution to Africa and the acquisition of an upright bipedal striding gait, the hallmark of humanity, appears to be at least circumstantially linked to the reduction of equatorial forests and the spread of grasslands on that continent. The diverse Lothagam fauna documents the end-Miocene transition from forested to more open habitats that were exploited by grazing horses and antelopes, hippos, giant pigs, and true elephants. It also includes spectacularly complete fossil carnivore skeletons and some of the oldest human remains. Enlisting a team of highly qualified specialists, this book provides the geologic context and dating framework for the Lothagam fossiliferous sequences, describes the immense diversity of vertebrate fossils recovered from the Late Miocene and Early Pliocene sediments, and synthesizes the results to interpret the changing paleoenvironments that prevailed at this site. The book will interest anthropologists, paleontologists, geologists, and anyone interested in human origins.

An analysis the Roman imperial succession and the failure to come up with an enduring, consistent system for selecting the next emperor with over 22 genealogical tables and 100 images illustrating the Emperors. John D Grainger analyses the Roman imperial succession, demonstrating that the empire organized by Augustus was fundamentally flawed in the method it used to find emperors. Augustus' system was a mixture of heredity, senatorial and military influences, and these were generally antagonistic. Consequently the Empire went through a series of crises, in which the succession to a previous, usually dead, emperor was the main issue. The infamous 'Year of the Four Emperors', AD 69, is only the most famous of these crises, which often involved bouts of bloody and destructive civil war, assassinations and purges. These were followed by a period, usually relatively short, in which the victor in the 'crisis' established a new system, juggling the three basic elements identified by Augustus, but which was as fragile and short lived as its predecessor; these 'consequences' of each crisis are discussed. The lucid and erudite text is supported by numerous genealogical tables and dozens of depictions of emperors.
