Exotic Animal Hematology and Cytology, Fourth Edition updates the most comprehensive reference available on exotic animal hematology and cytology of all major species. Acts as both an atlas and a text, offering high-quality photographs and step-by-step descriptions of techniques associated with preparing and interpreting hematology and cytology samples Presents complete information on hematology and cytology in a wide range of exotic species, including small mammals, birds, reptiles, amphibians, and fish Includes more than 700 high-quality color photographs, now with sizing bars Takes a new disease-based structure for improved ease of use Provides straightforward step-by-step descriptions of sample preparation and interpretation

This comprehensive and authoritative reference covers all aspects of the group of disorders collectively known as the lymphoid neoplasms. The reader is taken through a description of its normal cellular origins and the molecular genetic abnormalities that can lead to this group of conditions, a section of the book that has been considerably strengthened for this third edition, to the environmental factors that may be relevant to

disease development, and, finally, to the pragmatic aspects of disease management. The authors synthesise for the reader aspects of current knowledge and likely future developments, and direct them to the appropriate resources should they wish to pursue particular avenues of scientific or literature research.

This handbook is a practical guide to inpatient and outpatient rheumatology consultations. It focuses on how to approach rheumatological problems, how to perform a musculoskeletal examination and arthrocentesis, and which medications are appropriate, including dosage and recommended monitoring. Content includes overviews of the major rheumatic diseases and sections on crystalline arthritis, seronegative spondyloarthropathies, vasculitis, infectious causes of arthritis, and miscellaneous rheumatology consultations.

The Washington Manual of Nephrology Subspecialty Consult has been thoroughly updated and covers inpatient and outpatient management of nephrology with the same clinical practicality as the widely-popular Washington Manual™ of Medical Therapeutics. It has been written by the residents, fellows, and attending physicians of the distinguished Washington University School of Medicine and is tailored for residents performing inpatient consults, students working on an inpatient medicine service, and specialists seeking fast-

Now available in a thoroughly revised Twelfth

Edition, Wintrobe's Clinical Hematology continues to

be an industry leader with its ability to correlate basic

science with the clinical practice of hematology. With

the first edition of Wintrobe's Clinical Hematology

published in 1942 clearly establishing hematology as

a distinct subspecialty of Internal Medicine, the latest

edition continues the influence of the Wintrobe name

and helps to set this book apart from the

competition. With its strong focus on the clinical aspects of hematology, the book has generated a strong following among internists and general practitioners who want a single resource to consult for their patients who present any blood related disorder. The Twelfth Edition is in full color for the first time, boasts a new editorial team, and includes expanded coverage of new medications and four new chapters on Newborn Anemias, Pathology of LHC, Spleen Tumors, and Myeloproliferative Disorders and Mast Cell Disease. A companion Website will offer the fully searchable text and an image bank.

This handbook is a practical guide for medical students, residents, and fellows treating older adults. It was prepared by residents and fellows in internal medicine, geriatrics, cardiology, ophthalmology, rheumatology, and urology, with faculty advisors from the Division of Nutrition and Aging. The authors provide a framework for approaching the important issues that arise in geriatrics and focus on key aspects of the evaluation and treatment of common geriatric disorders and consultations. Tables and appendices provide rapid point-of-care access to information such as cognitive and functional assessment tests and important drug interactions. This concise and practical reference, tailored for fellows, residents, and medical students rotating on gastroenterology subspecialty services, covers both

inpatient and outpatient management of gastroenterology with the same clinical practicality as the widely popular Washington Manual™ of Medical Therapeutics. With gastroenterology continuing to expand as a specialty, there is a wealth of new insights on disease pathophysiology, diagnostic tools, and management options that this manual helps to address. It is the result of a collaborative effort of residents, fellows, and clinical faculty from the distinguished Washington University School of Medicine and serves as a practical quick reference guide to the diagnosis and treatment of gastrointestinal ailments. New features include:

- Two new chapters included:
 - o Liver Transplantation
 - o Genetic Testing in GI Disease
- Chapter on nutrition has been revised to reflect Malnutrition, both over and under nutrition
- Consistent formatting of chapters including the format of individual diseases and symptoms revised to follow specific subheadings
- Extensively updated to include chapter rewrites where necessary

The Washington Manual of Hematology and Oncology Subspecialty Consult Lippincott Williams & Wilkins Written by experts in cardiovascular disease, hematology, and oncology, The Washington Manual® of Cardio-Oncology: A Practical Guide for Improved Cancer Survivorship is a clinically relevant, easy-to-use primer on the detection, management, and improved cardiovascular-based patient outcomes in adults undergoing treatment for cancer or who have previously survived cancer therapy. Edited by Drs. Daniel J. Lenihan, Joshua D. Mitchell, and Kathleen W. Zhang, this concise yet comprehensive manual provides high-yield information that reflects today's advances in risk stratification, early diagnosis, and treatment of cardiovascular disease--all in an easy-access, concisely bulleted format for on-the-go reference. Discusses the multitude of complex adverse effects of chemotherapy, targeted therapy, immunotherapy, and radiation therapy to help optimize quality of life and prolong survival in this vulnerable patient population. Includes chapters on how cancer therapy affects the myocardium, valves, pericardium and cardiac electrical system including handy reference tables on typical side effects of commonly used cancer therapies. Provides practical guidance in an easy-to-follow format that covers definition, associated drugs/therapies, epidemiology, diagnosis (history, physical exam, and diagnostic testing), treatment, and outcome/prognosis. This leading text reflects both the new direction and explosive growth of the field of hematology. Edited and written by practitioners who are the leaders in the field, the book covers basic scientific foundations of hematology while focusing on its clinical aspects. This edition has been thoroughly updated and includes ten new chapters on cellular biology, haploidentical transplantation, hematologic manifestations of parasitic diseases, and more. The table of contents itself has been thoroughly revised to reflect the rapidly changing nature of the molecular and cellular areas of the specialty. Over 1,000 vivid images, now all presented in full color for the first time, include a collection of detailed photomicrographs in every chapter, selected by a hematopathology image consultant. What's more, this Expert Consult Premium Edition includes access to the complete contents of the book online, fully searchable

This survival guide provides all the information that is essential for a surgical internship, including daily routine, rounds, chart reviews, preoperative and postoperative care, operating room conduct, radiology, critical care, and interaction with families, colleagues, and allied health professionals. Comprehensive sections on common problems in general surgery, neurosurgery, orthopaedic surgery, urology, and plastic surgery present evaluation, diagnostic testing, and treatment in an easy-to-follow format. Other chapters cover crashing patients, tubes and drains, bleeding, codes, and nutrition.

The Government Performance and Results Act (GPRA), passed by Congress in 1993, requires that federal agencies write five-year strategic plans with annual performance goals and produce an annual report that demonstrates whether the goals have been met. The first performance reports are due in March 2000. Measuring the performance of basic research is particularly challenging because major breakthroughs can be unpredictable and difficult to assess in the short term. This book recommends that federal agencies use an "expert review" method to examine the quality of research they support, the relevance of that research to their mission, and whether the research is at the international forefront of scientific and technological knowledge. It also addresses the issues of matching evaluation measurements to the character of the research performed, improving coordination among agencies when research is in the same field, and including a human resource development component in GPRA strategic and performance plans.

presents practical, must-have information from the front lines of the wards in an easy-to-use quick reference format. The Washington Manual Subspecialty Consult Series is designed to provide quick access to the essential information needed to evaluate a patient on a subspecialty consult service. The Washington Manual of Hematology and Oncology subspecialty consult has been completely reviewed, revised, and follows the bulleted format and template of The Washington Manual of Medical Therapeutics, 33/e to allow for quick, readily accessible information. This edition has been updated to include new standards in the treatment of malignancies and hematologic disorders, mechanisms of action of new therapeutic agents, and the current use of molecular prognostic factors. The information in each chapter is now presented in a consistent format, with important references cited. The Manual is a practical reference for fellows, residents, and medical students rotating on hematology and oncology subspecialty services. Most of the authors are hematology-oncology fellows or internal medicine residents, the physicians who have recent experience with the issues and questions that arise in the course of training in these subspecialties. Primary care practitioners and other health care professionals also will find this manual useful as a quick reference source in hematology and oncology. Features include: New, templated format same as The Washington University Medical Therapeutics, 33e Contains synopsis of symptoms, signs, and problems encountered in their daily workflow in a bulleted format for quick salient points Includes new standards in the treatment of malignancies and hematologic disorders, mechanisms of action of new therapeutic agents, and the current use of molecular prognostic factors Prepared by residents and fellows, this consult manual covers the full spectrum of infectious disease problems. It offers

clinicians valuable assistance in determining what infections the patient is at risk for, where and how (s)he acquired the infection, how to evaluate and manage the patient, and what complications to expect. Chapters on infections of each organ system begin with an approach to that organ system. Other topics covered include bioterrorism, sexually transmitted diseases, brucellosis, systemic mycoses, immunizations, and antimicrobials.

Prepared by residents and fellows with senior faculty advisors, this quick-reference manual outlines current concepts and practice guidelines in the rapidly evolving fields of allergy, asthma, and immunology. Symptom-oriented and disease-oriented sections cover both acute and chronic problems, including drug allergy, anaphylaxis, eosinophilia, immunodeficiency, and latex allergy. Appendices include commonly used allergy and asthma drugs, laboratory values for tests in immunology, and a sample schedule for perennial aqueous immunotherapy.

This handy reference is a practical guide to the diagnosis and treatment of hematologic disorders and adult malignancies. Coverage includes both symptom-oriented and disease-oriented management strategies and both acute and chronic problems. The authors discuss the major clinical manifestations and usual management options for each disease entity, and provide lists of "key points to remember" and current references. This book provides a comprehensive, state-of-the art review of hematopoietic stem cell transplantation (HSCT) for sickle cell disease (SCD). The book reviews new data about risk prediction for severe SCD, outlines the unique challenges of HSCT for patients with SCD, profiles the supportive care guidelines for patients who are undergoing HSCT, highlights our current understanding of the best transfusion support for SCD patients prior to, during and after HSCT, and provides new perspectives about the ethics of HSCT for pediatric patients with SCD. Published in the last few years, several landmark phase III trials that utilize matched unrelated and haploidentical donors for HSCT in SCD patients are also placed in context with respect to current management. Written by experts in the field, Sickle Cell Disease and Hematopoietic Stem Cell Transplantation is a valuable resource for physicians and researchers dealing with and

interested in this challenging, yet exciting, curative therapy for sickle cell disease, that will help guide patient management and stimulate investigative efforts.

With authoritative coverage of rare and common hemostatic disorders, Consultative Hemostasis and Thrombosis, 4th Edition, keeps you both up to date with all that's new in this fast-moving field as well as reviewing background and development and citing pertinent classical literature. Broad differential diagnoses are provided, underscoring the editors' position that correct treatment begins with correct diagnosis. This trusted resource by Drs. Craig S. Kitchens, Craig M. Kessler, Barbara A. Konkle, Michael B. Streiff, and David A. Garcia is designed for rapid reference and critical decision making at the point of care.

tissues by L.O. Jacobson (9), and (2) by treatment with bone marrow suspensions by E. Lorenz and his col laborators (12). The site chosen for this annual meeting of the International Society for Experi mental Hematology is given a special historic sig nificance by the fact that it was 25 years ago that the first publication on this subject by Lorenz ap peared from his laboratory at the National Insti tutes of Health. Lorenz's discovery marked the beginning of a period which lasted until 1956, during which the protection afforded by hemopoietic cell suspensions was confirmed by many. This soon led to an intensive scientific de bate on the mechanism of this protective effect: was it due to a humoral factor produced and pro vided by the bone marrow-as Lorenz The Appearance of postulated-or to transplanta tion and subsequent proliferation of hemop- etic cells? This question was defini- 1 the Multipotential tively answered in 1956 by evidence from three different laboratories (7, 15, 26), which demonstrated the origin of the cells Hemopoietic in the repopulated tissues using a variety of cellu lar and immunologic markers. By the same token, these contributions marked the birth of radiation Stem Cell chimeras.
