This book is a practical and detailed guide on how to perform a range of surgical techniques for facial bone contouring. Based on the clinical experiences gained by the authors while carrying out more than 10,000 facial bone surgeries at their clinical institute in Seoul, Korea, each procedure is meticulously described and illustrated, step by step. Importantly, careful attention is paid to the impact of ethnic differences on surgical technique and goals, drawing on lessons learned during the treatment of patients from approximately 30 countries. Readers will also find instructive accompanying case studies and copious guidance on preoperative patient assessment, potential complications, and complication management. Facial bone contouring surgery has been gaining popularity not only in many Asian countries but also in Western countries, especially those in which there are sizable Asian populations. In enabling readers to learn and master the various techniques of facial bone surgery, and to achieve optimal outcomes in clinical practice, the book will be of immense value to plastic surgeons in both Asia and the West.

This book offers clinical physicians and plastic surgeons a detailed and comprehensive overview of the nonsurgical techniques used for rejuvenation of the lips and eyes. A key aim is to provide practical guidelines for patient selection in order to optimize the choice of treatment in different circumstances. These guidelines will assist in ensuring that the selected rejuvenation technique and the number of applications are appropriate to the specific disorder being treated, thereby maximizing benefits and minimizing side effects. The book explains pretreatment evaluation and describes a wide variety of rejuvenation techniques, including the use of hyaluronic acid fillers, botulinum toxins, skin needling, chemical peels, radiofrequency, ultrasound, and fractional lasers (ablative and nonablative). Contraindications to and complications of the various treatments are clearly identified. A notable feature is the emphasis placed on the role of combined treatments and how they can work in a complementary way to deliver optimal outcomes. The integrated, less invasive approach to periorbital and lip rejuvenation described here by acknowledged experts in the field will enable practitioners to choose with confidence the best aesthetic procedures and innovative tools for their patients.

Minimally invasive aesthetic procedures are an important part of dermatologists' day-to-day clinical routine. However, plastic surgeons are also becoming more willing to explore them, and minimally invasive cosmetic and aesthetic procedures are now an established interdisciplinary topic. Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons addresses the needs of both these specialties. It provides a comprehensive overview of the most relevant and widely used minimally invasive procedures, presented in a practical and straightforward style. Rather than a broad overview of the literature, it offers a step-by-step guide to clinical procedures. Each chapter explores a single clinical procedure, discussing the theoretical basis; the materials needed; the methods and techniques; clinical follow-up; before-and-after illustrations; as well as the side effects and complications and their management. It also includes a summary of tips and relevant references. With more than a hundred procedures presented and discussed in a clinically applicable format, Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons is a practical manual for all dermatology and plastic surgery practitioners who are interested in aesthetic medicine.

The biggest buzz in the facial and body lifting beautification and rejuvenation category is by far around mini-invasive scarless techniques. They are presented by suture and thread lifts. Both suture and thread lift techniques have many unique properties. For example, young patients do not want to be scarred with classic open face liftings. Also, for Asians,

Afro-Americans, and Latino-Americans, who have higher percentage of keloids, these are the preferred non-scarring cosmetic surgery methods. Scarless mini-invasive lifting techniques, such as suture and thread lifts, need proper explanation and public access. This will be the first scientific book that could clear the false public belief that transcutaneous suture and thread lifts are one and the same method.

This book is a thorough guide on how to perform safe and effective thread-lifting procedures as a less invasive approach to rejuvenation of the face. The opening chapters explain the importance of the fixation technique, describe the facial and the pinch anatomy, and discuss the characteristics of absorbable threads. Clear descriptions are then offered of the basic technique employed for thread lifting, as well as techniques applicable for each thread type and techniques specific to each anatomic area. Understanding is aided by the inclusion of an abundance of illustrations depicting anatomy and technique. Potential complications and their management are systematically explained, and a new approach to outcome evaluation is also presented. The Art and Science of Thread Lifting will help plastic surgeons and dermatologists at all levels of experience to achieve the best possible outcomes in individual patients.

Alopecia is the general medical term for hair loss. There are many types of hair loss with different symptoms and causes. This book provides clinicians with the latest information and advances in the diagnosis and management of hair loss. Beginning with an overview of embryology, anatomy, hair cycle and classification, the following chapters cover numerous different types of alopecia and its treatment. Each chapter guides clinicians step by step providing an introduction and discussion on etiopathogenesis, then clinical features, investigation techniques, differential diagnosis, and treatment options. The comprehensive text is further enhanced by flowcharts, illustrations, photographs and comparative tables to assist learning. The Art and Science of Thread Lifting Based on Pinch Anatomy Springer

Dieses Buch beschreibt die Anwendungsmöglichkeiten von minimalinvasiven Maßnahmen ohne Skalpell und Endoskop als Alternative und Ergänzung zur ästhetischen Gesichtschirurgie. Es wird detailliert auf die anatomischen und histologischen Besonderheiten der ästhetischen Zonen des Gesichts und der beteiligten Gewebearten eingegangen. Das dargestellte Methodenspektrum erstreckt sich von ablativen Maßnahmen, etwa das chemische und mechanische Peeling sowie Laserbehandlungen, über Füllmaterialien zur Volumenaddition, wie zum Beispiel Hyaluronsäure, Calcium-Hydroxylapatit oder Eigenfett, bis zu Gewebsverlagerung über Fadenkonstruktionen mit Häkchensystemen und Systemen mit „cones“. Als moderner Ansatz unter den minimalinvasiven Maßnahmen wird die Regeneration des Gewebes durch Stammzellen und Wachstumshormone dargestellt, wobei die Regeneration des Gewebes durch die Behandlung mit thrombozytenreichem Plasma (PRP), durch Needling-Verfahren oder Eigenfett aktiviert wird. Behandlungen mit Botulinumtoxin A zur Muskelrelaxation und zur Schweißdrüsenbehandlung, Kryolipolyse, die Fett-weg-

Spritze und die transkutane Lippektomie erweitern die minimalinvasiven Möglichkeiten in der Gesichtsästhetik. Für Ärzte, die sich auf dem Gebiet der Minimalinvasiven, Plastischen und Ästhetischen Maßnahmen weiter bilden möchten. Ergänzend zum gedruckten Werk finden Sie per App zahlreiche Videos, die die Verfahren in der Praxis zeigen.

Physical attractiveness of the face has a significant impact on the social life and daily interaction of individuals as well as ones general perception of life. Proper surgical planning for aesthetic facial surgery requires a meticulous analysis of the patients current and desired facial features from the perspective of both soft and hard tissues. Significantly greater changes to facial aesthetics can be made via the alteration of the main bony structures of the face than by alteration of soft tissue and skin alone. Various surgical and clinical techniques are available for the augmentation, reduction or refinement of the most prominent aspects of facial aesthetics, such as alterations to the cheek, chin, nose, para-nasal area, as well as the angle of the jaw. These techniques can be categorized as office-based or non-invasive techniques (filler injections, facial liposculpture or liposuction to modify the soft tissue of the face) and invasive surgical interventions such as facial prosthesis and maxillofacial osteotomies. In order to achieve the optimum aesthetic results for patients who undergo bi-maxillary or mono-maxillary orthognathic surgery, it is of paramount importance to utilize a hard and soft-tissue integrated approach. These integrated approaches have utilized the latest techniques in 3-dimentional printing, computer-assisted surgery, tissue engineering and stem-cell therapy in order to achieve positive and lasting outcomes. Integrated Procedures in Facial Cosmetic Surgery includes chapters that focus on facial analysis and clinical evaluation and best practices in surgical techniques such as: principles of bone contouring; genioplasty; mentoplasty; malarplasty; rhinoplasty; orthognathic surgery and intra-oral plastic surgery; lifting procedures like blepharoplasty; surgical approaches to cleft lip and palate surgery; as well as the principles of facial photography. Written by a team of renowned international experts, this textbook features over 900 original photographs, fully illustrating each procedure in a stepwise manner. Integrated Procedures in Facial Cosmetic Surgery is an essential companion for oral and maxillofacial surgeons, plastic surgeons and otolaryngologists, as well as for cosmetic surgeons and clinical residents dealing with face rejuvenation. Its contents will also be of interest to dentists, prosthodontists, periodontists, radiologists, general surgeons, and dermatologists.
