Understanding of Operational Counter Terrorism is one serious effort to lay out a comprehensive strategy of how to deal with a whole gamut of possible terrorist incidents by using a language that any person or first responders like policemen, security personnel, firemen, paramedics, etc. can understand. This guide covers everything from bombings and hostage-taking, to NBC (Nuclear, Biological and Chemical) Terrorism, what needs to be done before, during, and after an event. This manual combines what minimally needs to be understood about Operational Counter-Terrorism by the government-level policy maker, while at the same time helping the personnel on the first responder level who are planning to cope with what must at least initially seem like an overwhelming attack. Terrorism is global and any part of this guide can easily be adapted and translated to any region, law and government in the world. This manual should make clear that the only way, to effectively deal with terrorism is to have a thorough understanding of its present-day characteristics such as who is involved and what weapons and tactics are the terrorists likely to be using. The players on the Counter-Terrorism team need to take stock of what is in their tool boxes; what works and what is required; what new capabilities need to be developed in order to face not only today's terrorist, but also tomorrow's as well.

Cape Verde Investment and Business Guide - Strategic and Practical Information

This book addresses major issues facing postal and delivery services throughout the world. Worldwide, there is currently a considerable amount of interest in postal and delivery economics. The industry is reacting to a state of near crisis and is implementing different drastic changes. The European Commission and member States are still wrestling with the problem of how to implement entry liberalization into

postal markets, how to address digital competition, and how to maintain the universal service obligation (USO). The Postal Accountability and Enhancement Act of 2006 in the U.S. has perhaps created and exacerbated the problems faced by USPS. Digitalisation, technological development and online platforms are strongly affecting both the way postal and delivery operators are managing their services as well as their role on the market. Strong emphasis was attributed to the assets of Postal Operators (POs) and their added value in the digital age as well as on new business strategies. This volume presents original essays by prominent researchers in the field, selected and edited from papers presented at this year's 26th Conference on Postal and Delivery Economics held in Split, Croatia, from May 30- June 2, 2018. Topics addressed by this volume include quality of service, last mile solutions, and competition in the liberalized market. This book will be a useful tool not only for graduate students and professors, but also for postal administrations, consulting firms, and federal government departments.

This book constitutes the refereed proceedings of the 28th Annual German Conference on Artificial Intelligence, KI 2005, held in Koblenz, Germany, in September 2005 - co-located with the 3rd German Conference on Multiagent System Technologies (MATES 2005). The 29 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from 113 submissions. The papers are organized in topical sections on knowledge representation and reasoning, machine learning, diagnosis, neural networks, planning, robotics, and cognitive modeling, philosophy, natural language. The International Textbook of Diabetes Mellitus has been a successful, well-respected medical textbook for almost 20 years, over 3 editions. Encyclopaedic and international in scope, the textbook covers all aspects of diabetes ensuring a truly multidisciplinary and global approach. Sections covered include epidemiology, diagnosis, pathogenesis, management and complications of diabetes and public health issues worldwide. It incorporates a vast amount of new data regarding the scientific understanding and clinical management of this disease, with each new edition always reflecting the substantial advances in the field. Whereas other diabetes textbooks are primarily clinical with less focus on the basic science behind diabetes, ITDM's primary philosophy has always been to comprehensively cover the basic science of metabolism, linking this closely to the pathophysiology and clinical aspects of the disease. Edited by four world-famous diabetes specialists, the book is divided into 13 sections, each section edited by a section editor of major international prominence. As well as covering all aspects of diabetes, from epidemiology and pathophysiology to the management of the condition and the complications that arise, this fourth edition also includes two new sections on NAFLD, NASH and non-traditional associations with diabetes, and clinical trial evidence in diabetes. This fourth edition of an internationally recognised textbook will once again provide all those involved in diabetes research and development, as well as diabetes specialists with the most comprehensive scientific reference book on diabetes available.

The Fordham Competition Law Proceedings are acknowledged as simply the most definitive US/EC annual analyses of antitrust/competition law published. Recent "hot topics" include antitrust enforcement in Asia, Latin America: competition enforcement in the areas of telecommunications, media and information technology. All of the chapters raise questions of policy or discuss new developments and assess their significance and impact on antitrust and trade policy.

During the last few decades, multilateral and regional trade negotiations and unilateral liberalization have substantially reduced tariff rates. Non-tariff measures (NTMs), however, represent a growing challenge for exporters and policy makers. The ability to gain and to benefit from market access depends increasingly on compliance with trade regulatory measures such as sanitary requirements and goods standards. UNCTAD has been actively involved in research and activities on issues related to NTMs. In 1994, UNCTAD began to collect and classify NTMs. While the UNCTAD Trade Analysis and Information System (TRAINS) database remains the most comprehensive database on NTMs, it has required substantial improvements to keep up with the increasing complexity of and need for NTM data. To develop a strategy to reduce the transparency gap, in 2006, UNCTAD established the Group of Eminent Persons on Non-tariff Barriers, composed of leading economists from international organizations. A Multi-agency Support Team provided substantial support. As a result, the Transparency in Trade initiative (TNT) was launched by UNCTAD, the African Development Bank, the International Trade Centre and the World Bank. UNCTAD leads the international effort on official NTM data collection.
