This book includes the original, peer-reviewed research from the 2nd International Conference on Emerging Trends in Electrical, Communication and Information Technologies (ICECIT 2015), held in December, 2015 at Srinivasa Ramanujan Institute of Technology, Ananthapuramu, Andhra Pradesh, India. It covers the latest research trends or developments in areas of Electrical Engineering, Electronic and Communication Engineering, and Computer Science and Information.

Software -- Operating Systems.

????????????????????, ?????????????????, ???.

Using small, simple, focused chapters—and assuming no previous knowledge of the subject—this tutorial provides readers with the firm knowledge foundation necessary for performing everyday, routine UNIX tasks, and for exploring more advanced UNIX topics. It carefully shows where UNIX fits into to the operating system mix by covering operating system concepts in general before focusing on UNIX and the UNIX environment. Features step-by-step command sequences and practice examples, UNIX screen captures, terminal sessions and exercises, and Command summaries. The UNIX Operating System. The vi Editor. The UNIX File System. Exploring the Shell. UNIX Communication. Program Development. Shell Programming. Shell Scripts: Writing Applications.

This book constitutes the refereed proceedings of the 19th International Conference on Web Engineering, ICWE 2019, held in Daejeon, South Korea, in June 2019. The 26 full research papers and 9 short papers presented were carefully reviewed and selected from 106 submissions. Additionally, two demonstrations, four posters, and four contributions to the PhD symposium as well as five tutorials are included in this volume. The papers cover research areas such as Web mining and knowledge extraction, Web big data and Web data analytics, social Web applications and crowdsourcing, Web user interfaces, Web security and privacy, Web programming, Web services and computing, Semantic Web and linked open data applications, and Web application modeling and engineering.

????????????????????,????????????????,??,????????????????????.

This volume is the first in a series which aims to contribute to the wider dissemination of the results of research and

development in database systems for non-traditional applications and non-traditional machine organizations. It contains updated versions of selected papers from the First International Symposium on Database Systems for Advanced Applications. Contents: A Framework for the Parallel Evaluation of Recursive Queries in Deductive Databases (R-P Qi & W Bibel) Realization of Composite Relationship Views Utilizing Regular Expressions (H-Y Xu & Y Kambayashi) Seamless Interconnection in Federated Database Systems (D Fang & D McLeod) Case-Based Evolutionary World Model for Electronic Secretaries (K Kanasaki & T L Kunii) Design and Implementation of a Visual Query Language for Historical Databases (E Oomoto & K Tanaka) Intersection Operations in a Multi-Layered Spatial Data Model (D W Embley & G Nagy) Partial Match Retrieval Using Multiple-Key Hashing with Multiple File Copies (K Ramamohanarao et al.) Overview of Functional Disk System (M Kitsuregawa et al.) and other papers

Readership: Computer scientists and engineers.

The first International Conference on Intelligent Tutoring Systems (ITS) was held ten years ago in Montreal (ITS '88). It was so well received by the international community that the organizers decided to do it again in Montreal four years later, in 1992, and then again in 1996. ITS '98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal, and it's only been two years (not four) since the last one. One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization (e.g., IEEE or AACE). Rather, the founder of these conferences, Claude Frasson, started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues. Thus the unifying theme is science. This year's "hot topics" differ from those in the earlier ITS conferences as they reflect ever changing trends in ITS research. A few of the issues being examined at ITS '98 include: Web based tutoring systems, deploying ITS in the real world, tutoring and authoring tools, architectures, and knowledge structure and representation.

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

Beginning Linux Programming, Fourth Edition continues its unique approach to teaching UNIX programming in a simple and structured way on the Linux platform. Through the use of detailed and realistic examples, students learn by doing, and are able to move from being a Linux beginner to creating custom applications in Linux. The book introduces fundamental concepts beginning with the basics of writing Unix programs in C, and including material on basic system calls, file I/O, interprocess communication (for getting programs to work together), and shell programming. Parallel to this, the book introduces the toolkits and libraries for working with user interfaces, from simpler terminal mode applications to X and GTK+ for graphical user interfaces. Advanced topics are covered in detail such as processes, pipes, semaphores,

product description or the product text may not be available in the ebook version.

Annotation. This book constitutes the refereed proceedings of the 4th International Workshop on Real-World Wireless Sensor Networks, REALWSN 2010, held in Colombo, Sri Lanka, in December 2010. The 11 full papers and the 5 short papers presented were carefully reviewed and selected from 34 submissions. The papers are organized in topical sections on applications; OS support and programming; communication & MAC; and poster and demonstration abstracts.

From driverless cars to vehicular networks, recent technological advances are being employed to increase road safety and improve driver satisfaction. As with any newly developed technology, researchers must take care to address all concerns, limitations, and dangers before widespread public adoption. Transportation Systems and Engineering: Concepts, Methodologies, Tools, and Applications addresses current trends in transportation technologies, such as smart cars, green technologies, and infrastructure development. This multivolume book is a critical reference source for engineers, computer scientists, transportation authorities, students, and practitioners in the field of transportation systems management.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT

executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.
