Laura Hartman's: Perspectives in Business Ethics offers a foundation in ethical thought, followed by a variety of perspectives on difficult ethical dilemmas in both the personal and professional context. This anthology encourages the reader to "critically evaluate each perspective using his or her own personal ethical theory base." Instructors who favor an interactive, discussion-oriented approach to the ethics course will appreciate the different perspectives offered by the Hartman text. This book incorporates the traditional text with definitions and explanations, and combines it with short and long cases, reprints of both traditional and innovative articles, and nontraditional materials such as song lyrics, excerpts from classical literature, and short stories. This text focuses on involving as many views as possible in ethical situations or decisions.

This book presents a comprehensive view of the ways in which the state and social actors use a range of rules and practices to govern and control many areas of social and work life, from the environment to cyberspace, from labour relations to corporate governance. The book explores the impact of globalization and technological change on regulation and governance and the challenges they pose to traditional notions of state sovereignty. The 15 chapters by leading scholars and specialists in the field are organized into five parts: Theoretical

Dimensions; Labour, Capital, and the State; Dispute Resolution; Governing Self-Regulation; and Historical and Cultural Perspectives on Regulation and Governance. While some chapters present theoretical understandings and overviews of particular areas of state involvement in civil society, others offer case studies of specific instances of regulation and governance. Indeed, a recurrent theme in this important collection is that however much the regulation and governance of society seem to change, the state remains involved either directly or indirectly by overseeing the self-regulation of social actors.

compliance requirements. However, real value can be added to the process if the auditor establishes a program that also focuses on overall performance relative to the objectives being met for registration. This book introduces a radical new approach that teaches the auditor how to add value, deliver business benefits and become a partner with the organization's management team. This book offers a proven effective questioning technique, structured around key business processes and linked to the requirements of the Standard. It will guide the auditor through a system that significantly contributes to achieving the organization's objective of not only compliance but more importantly, an improved process approach that has inherent long term benefits. With the 2000 update of ISO 9000, auditing has changed radically. With previous versions, the approach concentrated on compliance to specific and individual requirements, independently of how the system really contributed to achieving the organization's objectives. Auditors are now required to establish that the systems they are auditing have been based on these principles, one of which is the process approach. From five fundamental questions, a series of questions is derived for several business processes that will reveal the evidence needed to demonstrate compliance with ISO 9001:2000. At the same time, the strength of the organizations processes to achieve their objectives is tested.

This book examines the opportunities and constraints of environmental leapfrogging in Asia by zooming in on several country cases: China, Vietnam, Singapore and Taiwan. The world has witnessed the profound transformation of China, Vietnam, Taiwan and Singapore from impoverished developing regions into strong and internationally competitive economies. However, it has become obvious that their rapid development has come at a price. Contrary to their economic successes, these Asian economies have been much less successful in terms of ecological sustainability and environmental protection. Mega-cities, such as Shanghai, Beijing, and Ho Chi Minh City suffer from increased air pollution, traffic congestion and a boom in the generation of solid waste. The rapid industrialisation poses a dual challenge to the state. "Doing it right the first time" -- by installing clean technologies, developing the institutional capacity and the appropriate governance style to enforce environmental regulations- could lead to "leapfrogging", the development process and building industrial economies that are both competitive and more sustainable than economies with an older industrial base.
