Visualization in Modern Cartography explores links between the centuries-old discipline of cartography and today's revolutionary developments in scientific visualization. The book has three main goals: (1) to pass on design and symbolization expertise to the scientific visualization community - information that comes from centuries of pre-computer visualization by cartographers, and their more recent experiences with computerizing the discipline; (2) to help cartographers cope with the dramatic shift from print cartography to a dynamic virtual cartography for which their role is changing from that of map designer to one of spatial information display (and/or interface) designer; (3) to illustrate the expanded role for cartography in geographic, environmental, planning, and earth science applications that comes with the development of interactive geographic visualization tools. To achieve these goals, the book is divided into three parts. The first sets the historical, cognitive, and technological context for geographic/cartographic visualization tool development. The second covers key technological, symbolization, and user interface issues. The third provides a detailed look at selected prototype geographic/cartographic visualization tools and their applications.

But it is not too late to stop that hacking activity and let your vote decide the election. Here you discover the simple steps that can create a real difference. Good people are already working on it, but they need help. Make some good things happen. Give your candidate for president a fair chance to win.

In this exciting introduction to the sociology of health and medicine, Annandale examines the core issues of the discipline and reassesses them in the light of recent developments in health care and social theory. The Sociology of Health and Medicine considers the way in which recent economic and social change has generated new issues and necessitated a re-evaluation of the traditional concerns in the field of health, illness and health care. Annandale examines how theoretical and methodological developments in social theory - such as post-structuralism and revisions to Marxist, feminist and symbolic interactionist thought - has led to new thinking in a number of areas. These include the processes linking "race", gender and class to health and illness, the sociology of the health service and the division of labour within it, and the experience of health and health care. Through a discussion of both traditional and new topics in the field, this book offers a wide-ranging and up-to-date assessment of the state of the sociology of health, illness and health care. The result is an innovative text that both reflects and advances changes in the discipline.

This book explores the relationships between education, lifelong learning and democratic citizenship. It emphasises the importance of the democratic quality of the processes and practices that make up the everyday lives of children, young people and adults for their ongoing formation as democratic citizens. The book combines theoretical and historical work with critical analysis of policies and wider developments in the field of citizenship education and civic learning. The book urges educators, educationalists, policy makers and politicians to move beyond an exclusive focus on the teaching of citizenship towards an outlook that acknowledges the ongoing processes and practices of civic learning in school and society. This is not only important in order to understand the complexities of such learning. It can also help to formulate more realistic expectations about what schools and other educational institutions can contribute to the promotion of democratic citizenship. The book is particularly suited for students, researchers and policy makers who have an interest in citizenship education, civic learning and the relationships between education, lifelong learning and democratic citizenship. Gert Biesta (www.gertbiesta.com) is Professor of Education at the School of Education, University of Stirling, UK.

Medicine as Culture has become the classic text for the sociology of health and illness, combining perspectives drawn from a wide variety of disciplines including sociology, anthropology, social history and cultural studies. The book teases out how medicine and health care are sociocultural constructions, ranging from mass media and high cultural representations of illness, disease, and health care workers to the power dynamics of the doctor-patient relationship. The Third Edition has been updated to cover new and emerging areas of interest including: the role of computerized communication technologies in providing access to medical information; new medical technologies and how they contribute to people's understandings of their bodies and selfhood; how bioethical issues and dilemmas are negotiated in clinical settings; the changing role of nurses in healthcare provision; and new research in neuroscience on the plasticity of the brain and the notion of 'brain types' and how this research contributes to novel understandings of the brain in lay and medical cultures.

If you care about the education of a child, you need this book. Comprehensive and easy to use, it will inform, empower, and encourage you. Just as William J. Bennett's The Book of Virtues has helped millions of Americans teach young people about character, The Educated Child delivers what you need to take control. With coauthors Chester E. Finn, Jr., and John T. E. Cribb,

Jr., former Secretary of Education Bennett provides the indispensable guide. Championing a clear "back-to-basics" curriculum that will resonate with parents and teachers tired of fads and jargon, *The Educated Child* supplies an educational road map from earliest childhood to the threshold of high school. It gives parents hundreds of practical suggestions for helping each child succeed while showing what to look for in a good school and what to watch out for in a weak one. *The Educated Child* places you squarely at the center of your young one's academic career and takes a no-nonsense view of your responsibilities. It empowers you as mothers and fathers, enabling you to reclaim what has been appropriated by "experts" and the education establishment. It outlines questions you will want to ask, then explains the answers -- or non-answers -- you will be given. No longer will you feel powerless before the education "system." The tools and advice in this guide put the power where it belongs -- in the hands of those who know and love their children best. Using excerpts from E. D. Hirsch's Core Knowledge Sequence, *The Educated Child* sets forth a state-of-the-art curriculum from kindergarten through eighth grade that you can use to monitor what is and isn't being taught in your school. It outlines how you can help teachers ensure that your child masters the most important skills and knowledge. It takes on today's education controversies from phonics to school choice, from outcomes-based education to teaching values, from the education of gifted children to the needs of the disabled. Because much of a youngster's education takes place outside the school, *The Educated Child* also distills the essential information you need to prepare children for kindergarten and explains to the parents of older students how to deal with such challenges as television, drugs, and sex. If you seek high standards and solid, time-tested content for the child you care so much about, if you want the unvarnished truth about what parents and schools must do, *The Educated Child* is the one book you need on your shelf.

Non-native language teachers have often been viewed as an unavoidable fate of the profession, rather than an asset worth exploring and investigating. Now that non-natives are increasingly found teaching languages, and particularly English, both in ESL and EFL contexts, the identification of their specific contributions and their main strengths has become more relevant than ever. As a result, there has recently been a surge of interest in the role of non-native teachers but little empirical research has been published so far. This volume is particularly rich in providing different approaches to the study of non-native teachers: NNS teachers as seen by students, teachers, graduate supervisors, and by themselves. It also contributes little explored perspectives, like classroom discourse analysis, or a social-psychological framework to discuss conceptions of NNS teachers.

Evidence continues to build showing our information infrastructure is vulnerable to threats not just from nation states but also from individuals and small groups who seek to do us harm or who wish to exploit our weaknesses for personal gain. A critical element of a robust cybersecurity strategy is having the right people at every level to identify, build and staff the defenses and responses. And that is, by many accounts, the area where we are the weakest.

Father Goriot is one of French novelist Honore de Balzac's most important pieces of writing. Three lives intertwine in Paris: an old man, a criminal and a law student. The novel evokes an unstable period in France, when many were desperate to climb the social ladder into the upper classes, and it questions social institutions such as marriage. The city is an important presence in this work. Balzac was both praised and censured for his realistic portrayal of city life.

This guide examines how schools and universities can work together with their local communities to promote democracy in society based on the principles of Education for

Democratic Citizenship (EDC), a concept developed by the Council of Europe. Partnerships based on this idea foster civic skills and values in citizens and build the civic capacity of communities through the pursuit of collective solutions to local problems. The guide explores the mechanics of such partnerships in practice, describing how they are built and sustained, and what makes them work. Drawing on examples from Europe And The United States of America, The guide is intended for policy makers and practitioners in schools and universities, civil society and community groups, and representatives of public authorities and government bodies on both sides of the Atlantic.

The state of North Carolina has had a longstanding concern and commitment to the understanding and treatment of autistic, communications handicapped children and their families. This commitment found expression in the only comprehensive statewide program for families confronted with this disability, Division for the Treatment and Education of Autistic and related Communication handicapped Children (Division TEACCH). Our program staff has been privileged to respond to this commitment by developing and providing the needed services, and to engage in research informed by our clinical experience. Although many of the problems concerning these developmentally disabled children remain to be solved, substantial progress has been made during this past decade of collaboration among professionals, parents, and their government representatives. The TEACCH staff has resolved to mark the effectiveness of this collaboration by holding a series of annual conferences focused on the several major issues confronting these children and their families. The conferences are held in order to bring together the best research knowledge available to us from throughout the country, and to encourage participation by the different professional disciplines and concerned parents. In addition these annual meetings form the basis for a series of books based on the conference theme. These books are, however, not merely the published proceedings of the presented papers: some chapters are expanded from conference presentations and many others were solicited from experts in the related areas of research and their service application.
