Winner of Philosophy of Education Society of Australasia (PESA)'s inaugural PESA Book Awards in 2015, and The University of Hong Kong Research Output Prize for Education 2014-15. Muslims and Islam in U.S. Education explores the complex interface that exists between U.S. school curriculum, teaching practice about religion in public schools, societal and teacher attitudes toward Islam and Muslims, and multiculturalism as a framework for meeting the needs of minority group students. It presents multiculturalism as a concept that needs to be rethought and reformulated in the interest of creating a more democratic, inclusive, and informed society. Islam is an under-considered religion in American education, due in part to the fact that Muslims represent a very small minority of the population today (less than 1%). However, this group faces a crucial challenge of representation in United States society as a whole, as well as in its schools. Muslims in the United States are impacted by ignorance that news and opinion polls have demonstrated is widespread among the public in the last few decades. U.S. citizens who do not have a balanced, fair and accurate view of Islam can make a variety of decisions in the voting booth, in job hiring, and within their small-scale but important personal networks and

Schulten examines four enduring institutions of learning that produced some of the most influential sources of geographic knowledge in modern history: maps and atlases, the National Geographic Society, the American university, and public schools."--BOOK JACKET.

This book is an initiative presented by the Commission on Geographical Education of the International Geographical Union. It focuses particularly on what has been learned from geospatial projects and research from the past decades of implementing geospatial technologies (GST) in formal and informal education.

The objective of this publication is to inform an international audience of teachers, professionals, scholars, and policymakers about the state of the art and prospects of geospatial practices (GPs) as organized activities that use GST and lessons learned in relation to geographical education. GST make up an advanced body of knowledge developed by practitioners of geographic information systems (GIS), remote sensing (RS), global positioning systems, (GPS), and digital cartography (DC). GST have long been applied in many different sectors; however, their first use in higher

education began in the early 1980s and then diffused to secondary schools during the 1990s. Starting with GIS and RS, it evolved into a much broader context, as GST expanded to include GPS and DC with new communication technologies and Internet applications. GST have been used around the world as a combination of tools and special techniques to make research, teaching, and learning more effective.

'For geographers across the globe this book provides the arguments for a return to the teaching of geography and why they should reject the politicisation of the subject by education policy makers and politicians. Standish's careful critique shows the necessity of a depoliticised geography curriculum the irony of which would be that it would ensure that every child could point to Iraq, Iran and Afghanistan on a map.' Prof. Dennis Hayes – Oxford Brookes University, UK 'A prescient and critical analysis of the changing face of geography teaching. This book deserves to be widely read and debated. Alex Standish's book puts current trends in geography teaching in historical and critical context. It comprises a forthright and timely defence of geographical education for its own sake.' Dr Jim Butcher, FRSA, Department of Sport Science, Tourism and Leisure, Canterbury Christ Church University. Since the early 1990s, educational policy makers and some subject leaders have been seeking to fundamentally change the teaching of geography in UK and US schools, from a subject which encourages students to explore spatial concepts, ideas and skills, to a more ethics based subject concerned with the promotion of

environmentalism, cultural diversity and social justice. In this book the new approach is critically examined, within a historical and ideological context, addressing a number of fundamental questions: Should geography be used as a tool for the delivery of citizenship ideals? How does this affect the intellectual and moral value of geographical education for young people? If the state and teachers are taking more responsibility for the values, attitudes and emotional responses of students, how will they learn to develop these qualities for themselves? If global perspectives shift the focus of education from learning about the outside world to learning about the self, what is its vision of social progress and conception of social change? This book advocates a return to liberal models of education, arguing that the new approach to geography currently being promoted for schools fundamentally undermines the educational value of the subject, and the freedom of young people to shape the world in which they live. A vital resource for teachers and student teachers alike, *Global Perspectives in the Geography Curriculum* makes a significant contribution to the growing debate about the future direction of the discipline itself.

Political correctness, better known as “PC,” flourished in institutions of higher learning in the 1990s. With the rise of social media, a second wave of PC culture has emerged that is more aggressive than the first. It seems to many that nearly everyone is a target, at risk of being labeled a racist or misogynist based on one short tweet. The movement, though intended to be inclusive and pluralistic, has its detractors. Is political correctness
