Remarkably, more than half of the world's population now lives in cities, and the numbers grow daily as people abandon rural areas. This fully updated and revised seventh edition of the classic text offers readers a comprehensive set of tools for understanding the urban landscape, and, by extension, the world's politics, cultures, and economies. Providing a sweeping overview of world urban geography, noted experts explore the eleven major global regions. Each regional chapter considers urban history, economy, culture, and environment, as well as urban spatial models and problems and prospects. Each begins with two facing pages: a regional map that shows the major cities and a table of basic statistical information about cities and urbanization in each region and a list of ten salient points about that region's urban experience. Chapters conclude with a list of references, including films and webpages, which can be used by the student and instructor for additional information about specific cities. This edition adds the important new themes of climate change and migration, while continuing to focus specifically on sustainability, water, technology, social and environmental justice, security and conflict, the history of urban settlement, urban planning trends, and daily life. Vignettes of key cities give the reader a vivid understanding of daily life and the "spirit of place." The opening chapter presents an overview of key terms and concepts and explores contemporary world urbanization, and a concluding chapter projects the world's urban future. Liberally illustrated in full color with a new selection of photographs, maps, and diagrams, the text also includes a rich array of textboxes to highlight key topics ranging from migration and immigration to LBGTQ activism, human security, and climate change. Clearly written and timely, Cities of the World will be invaluable for those teaching introductory or advanced classes on global cities, regional geography, the developing world, and urban studies.

Developed around the theme of economic development, this edition has been completely revised. The text comprehensively covers the basic concepts of regional geography, exploring topics such as population, resources, cultural elements and our relationship with the environment.

This text focuses on the geographic nature of the forces at work for change in the world, including political, economic, cultural and environmental aspects. It emphasizes the dynamic nature of geographic regions in a changing world and the interdependence of the regions around the world, rather than cataloging their differences. It alerts readers to expect continuing change and encourages personal involvement with the changing world. The author focuses initial attention on the developmental problems of the poorer countries instead of imposing a Western model of development that is uncritically applied to the rest of the world.

World Regional Geography: People, Places and Globalization is designed for students to experience and study as much of the world as possible within a limited amount of time. It gives students the fundamental concepts and the latest data regarding world places in a concise, easy-to-read format. This World Regional Geography textbook focuses on the primary issues that have created our cultural and societal structures, and presents them within a framework for global understanding. A pattern of development is outlined from the imprint that European colonialism had on culture to the impact that giant retail corporations like Wal-Mart have on consumerism. Within this framework, the textbook takes a regional approach to globalization and world geography, as each chapter focuses on one subject or region. The first unit covers the basic concepts of location, the environment and global economic dynamics. Then, these basic concepts, theories and principles are presented for each region on a chapter-by-chapter basis. The basic concepts are covered using real world examples to provide purpose and relevance for the students. And each lesson begins with learning objectives and ends with key takeaways to stimulate critical thinking about each topic or region. Basic spatial concepts are also tracked throughout the text to connect ideas and apply concepts to every region of the world. Special sections on relevant topics are also distributed throughout the book. With each chapter focused on one region, the textbook provides professors with some course management and flexibility. The text is also brief enough to provide additional flexibility if professors want to include specialized information from outside sources. World Regional Geography: People, Places and Globalization provides students with a working knowledge of world geography in an easy-to-read format. Basic geographic concepts of world places are presented in concise chapters, and each chapter provides a foundational framework for understanding the development patterns of world regions. This book discusses the political and economic history and geography of Georgia, the problems it has faced, and how it has overcome and is still overcoming them. In most countries, at the end of the 20th century the successful resolution of social-economic, political, demographic and ecological problems was largely dependent on effectively protecting the population and economic assets from natural disasters and on ensuring conditions for their sustainable development. These problems are most acute in mountainous regions like Georgia, where the unplanned development of natural ecosystems has had drastic consequences. It is therefore necessary to understand not only the probability of changing conditions (natural as well as political and demographic), but also the probability of the resulting economic losses. The book is divided into four sections; historical and political geography, geological processes, ecological processes and developmental geography. In the historical and political geography section the authors present a detailed discussion on ancient history, historical and political geography, ethnic groups and religions, demographics and socio-cultural geography. The geological processes section contains information on geology, geodynamical processes, glacial and periglacial processes. The ecological processes section examines a variety of landscapes and ecosystems, aspects of deforestation, reforestation and desertification along with anthropogenic impacts on the environment. The developmental geography section looks at different economies, natural resources, sustainable development and climate change.

For courses in world regional geography. Conceptual Exploration of World Regions and the Myriad Issues Critical to Geography Today World Regions in Global Context presents a strong global sensibility and an emphasis on current events, with examples of interdependent development, spatial and social inequality, and questions of spatial justice. The authors maintain that regions are the outcomes of the twin forces of globalization and regionalization. Therefore, each regional chapter stresses the global systems of connection that drive unique regional processes, making regions different. By studying regions, students not only learn the critical elements of different places, but also come to understand the fundamental processes that drive change. The Sixth Edition is a briefer, more visual text that still maintains its conceptual rigor by addressing today's critical geographic themes, incorporating deeper focus on sustainability issues, new human stories from the regions, cutting-edge data visualizations and infographics, including a completely modernized cartography program, and much more. Remarkably, more than half of the world's population now lives in cities, and the numbers grow daily as people abandon rural areas. This fully updated and revised fifth edition of the classic text offers readers a comprehensive set of tools for understanding the urban landscape, and, by extension, the world's politics, cultures, and economies. Providing a sweeping overview of world urban geography, a group of noted experts explores the eleven major global regions. Each author presents the region's urban history, economy, culture, and society, as well as urban spatial models and problems and prospects.

Environmental, human security, globalization, and cyberspace topics are fully developed as well. Vignettes of seventy-eight key cities give the reader a vivid understanding of daily life and the "spirit of place." An introductory chapter presents an overview of key terms and concepts, and a concluding chapter projects the world's urban future. Liberally illustrated with a new selection of photographs, maps, and diagrams, the text also includes a rich array of textboxes to highlight key topics ranging from gender and the city to Islamic fashion and global warming. Bibliographic sources, websites, and an appendix of UN data provide additional resources for helping students understand more about the urban world. Clearly written and timely, Cities of the World will be invaluable for those teaching introductory or advanced classes on global cities, regional geography, and urban studies.
