Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for our children. This discipline addresses current issues such as climate change, increasing food and fuel prices, starvation, obesity, water pollution, soil erosion, fertility loss, pest control and biodiversity depletion. Novel solutions are proposed based on integrated knowledge from agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, philosophy and social sciences. As actual society issues are now intertwined, sustainable agriculture will bring solutions to build a safer world. This book series analyzes current agricultural issues and proposes alternative solutions, consequently helping all scientists, decision-makers, professors, farmers and politicians wishing to build safe agriculture, energy and food systems for future generations.

A modern classic of the new agrarianism "Chris Smaje...shows that the choice is clear. Either we have a small farm future, or we face collapse and extinction."—Vandana Shiva "Every young person should read this book."—Richard Heinberg In a groundbreaking debut, farmer and social scientist Chris Smaje argues that organizing society around small-scale farming offers the soundest, sanest and most reasonable response to climate change and

other crises of civilisation—and will yield humanity’s best chance at survival. Drawing on a vast range of sources from across a multitude of disciplines, *A Small Farm Future* analyses the complex forces that make societal change inevitable; explains how low-carbon, locally self-reliant agrarian communities can empower us to successfully confront these changes head on; and explores the pathways for delivering this vision politically. Challenging both conventional wisdom and utopian blueprints, *A Small Farm Future* offers rigorous original analysis of wicked problems and hidden opportunities in a way that illuminates the path toward functional local economies, effective self-provisioning, agricultural diversity and a shared earth. Perfect for readers of both Wendell Berry and Thomas Piketty, *A Small Farm Future* is a refreshing, new outlook on a way forward for society—and a vital resource for activists, students, policy makers, and anyone looking to enact change. During the last decades, soil organic carbon (SOC) attracted the attention of a much wider array of specialists beyond agriculture and soil science, as it was proven to be one of the most crucial components of the earth’s climate system, which has a great potential to be managed by humans. Soils as a carbon pool are one of the key factors in several Sustainable Development Goals, in particular Goal 15, “Protect, restore and promote sustainable use of terrestrial ecosystems,

sustainably manage forests, combat desertification and halt and reverse land degradation and halt biodiversity loss” with the SOC stock being explicitly cited in Indicator 15.3.1. This technical manual is the first attempt to gather, in a standardized format, the existing data on the impacts of the main soil management practices on SOC content in a wide array of environments, including the advantages, drawbacks and constraints. This manual presents different sustainable soil management (SSM) practices at different scales and in different contexts, supported by case studies that have been shown with quantitative data to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications. Volume 3 includes a total of 49 practices that have a direct impact on SOC sequestration and maintenance in cropland, grassland, integrated systems and farming approaches.

The e-book titled “Mukul Asher on Economic Reasoning and Public Policy: Case Studies from India”, edited by V.K. Ahuja & Ajay B. Sonawane is a collection of recent columns authored or co-authored by Professor Mukul Asher on applying economic reasoning to public policies in India. As India progresses towards USD 5 trillion economy, and as it addresses its socio-economic challenges, public policy discussions which are based on appropriate context-specific analytical frameworks and concepts,

using empirical evidence in a judicious manner to advance public interest, have become vital. The book also helps fill a gap in the literature as analysis of India's Post-2014 public policies and initiatives have not received deserved interest from the academics, think tanks, and researchers. This e-book represents a small step towards redressing this imbalance. The DSPPG plans to publish a series of books on a diverse set of public policy issues India, with a view to improve the quality of public policy education and dialogue in India. The present e-book is first in the series. All books are to be uploaded on the Website of Delhi School of Public Policy and Governance (DSPPG), University of Delhi and made freely available to all. Public support mechanisms for agriculture in many cases hinder the transformation towards healthier, more sustainable, equitable, and efficient food systems, thus actively steering us away from meeting the Sustainable Development Goals and targets of the Paris Agreement. This report sets out the compelling case for repurposing harmful agricultural producer support to reverse this situation, by optimizing the use of scarce public resources, strengthening economic recovery from the COVID-19 pandemic, and ultimately driving a food systems transformation that can support global sustainable development commitments. The report provides policymakers with an updated estimate of past and current agricultural producer support for 88 countries, projected up until 2030. The trends emerging from the analysis are a clear call for action at country, regional and global levels to phase out the most distortive, environmentally and socially harmful support, such as price incentives and coupled subsidies, and redirecting it towards investments in public goods and services for agriculture, such as research and development and infrastructure, as well as decoupled fiscal subsidies. Overall, the analysis highlights that, while removing and/or reducing harmful agricultural support is necessary, repurposing initiatives that include measures to minimize policy trade-offs will be needed to ensure a beneficial outcome overall. The report confirms that, while a few countries have started repurposing and reforming agricultural support, broader, deeper, and faster reforms are needed for food systems transformation. Thus, it provides guidance (in six steps) on how governments can repurpose

Pandit Deendayal Upadhyaya is well-known for his holistic philosophy of 'Integral Humanism' and the supreme challenge of today; is to convert his ideological-base to actual practice. The key objective of Integral Humanism is to develop an indigenous economic model, based on Bharatiya culture, to solve the problems faced by India. An indigenous economic operating system, with Dharma as its central pillar, is the need of the hour so that India will emerge as the strongest economy of the world in a purely ethical manner. Here in this book the authors try to propose such a developmental strategy by blending Blockchain technologies with Integral Humanism.

“The sun, the sky, the moon, the stars Move in celestial harmony Never violating the canons Of the divine powers Let man learn his lessons from nature's theme Live in peace and harmony No matter how strong or how wise Live within the realms of the divine scheme” — Rig Veda Ishkrithi—the generation and sustenance of nature in all respects... The earth has enough bounty for all living beings to live happily. But due to greed and selfishness, modern man has been exploiting nature, without a thought for the coming generations. This has resulted in natural calamities, droughts, floods, forest fires, etc. to the detriment of humanity at large. The ancient wisdom of Bharatadesh, known to the Maharshis with their Intellect-born knowledge, was revealed through the Vedas, which are the source of knowledge in crystal clear form. The Vrishti Yagna at Latur, which resulted in plentiful rains in a severely drought hit area, Yaga conducted for putting out forest fires in Uttarakhand, etc. are but a few examples of this ancient wisdom. politics in India, keeping in mind that a citizen of India should know more about the politicians who are in the government and form policies and so on to take the country in the proper direction. Even if there are two related members, it is considered as dynasty and is included in this book. Wherever possible, family trees, as well as the assets of our politicians, are shown. It was natural to start with the Nehru Gandhi family, being one of the largest and longest-ruling families at the helm of all affairs. Then state wise, the families are chosen and the account is presented. As the content is extensive, the book is published in two volumes. States are chosen alphabetically. So even if Nehru Gandhi family is in Volume 1, Tamilnadu, Telangana, Uttar Pradesh are in Volume 2. Early rulers in Indian history used to hand over the throne to their sons and then to the next generations for generations till some significant event upset the process, mostly conspiracies by persons like very close aides of the king or a revolt. Similar lines were followed even during our democracy, passing on the rule to the next generation, which gave rise to dynastic rule. Indian politics has witnessed a large spectrum of politicians from various fields. Initially, it consisted mainly of leaders from the field of law. Now, we find that we have eminent personalities from sports fields, actors, actresses, superstars from the silver screen. The literary field is no exception; we have writers, poets, and so on. Economists find a special place in the political arena. Politics does not shun even criminals or a few dacoits who then turned to politics after surrendering. Businessmen, kings or princes from princely states, as

the British decided to call them, are also found here. We have learned people in politics as also the illiterate people (angutha chhaap) who learned to sign only after assuming the office on being elected. People are interested in knowing the assets of politicians. This point is covered by using the asset declaration given by the politicians at the time of the election.

This book evaluates the relevance of classical debates on agrarian transition and extends the horizon of contemporary debates in the Indian context, linking national trends with regional experiences. It identifies new dynamics in agrarian political economy and presents a comprehensive account of diverse aspects of capitalist transition both at theoretical and empirical levels. The essays discuss several neglected domains in agricultural economics such as discursive dimensions of agrarian relations and limitations of stereotypical binaries between capital and non-capital, rural and urban sectors, agriculture and industry, and accumulation and subsistence. With contributions from major scholars in the field, this volume will be useful to scholars and researchers of agriculture, economics, political economy, sociology, rural development and development studies.

In this second edition of *The Spirit of the Soil: Agriculture and Environmental Ethics*, Paul B. Thompson reviews four worldviews that shape competing visions for agriculture. Productionists have sought increasing yields—to make two seeds grow where only one grew before—while traditional visions of good farming have stressed stewardship. These traditional visions have been challenged by two more worldviews: a call for a total cost accounting for farming and an advocacy for a holistic perspective. Thompson argues that an environmentally defensible systems approach must draw upon all four worldviews, recognizing their flaws and synthesizing their strengths in a new vision of sustainable agriculture. This classic 1995 study has been thoroughly revised and significantly expanded in its second edition with up-to-date examples of agriculture's impact on the environment. These include extensive discussions of new pesticides and the effects of animal agriculture on climate and other areas of the environment. In addition, a new final chapter discusses sustainability,

which has become a dominant idea within environmental studies and agrarian political philosophy.

Organic farming has experienced steady growth in terms of production, number of growers, area under cultivation and rise in use of organic inputs across India and Asia in general in recent times. It has gradually emerged as a viable substitute for the high-cost, high-polluting mechanized farming prevalent in many parts of the world, including India. This book starts with an extensive description of the economics of organic farming. Food products are grown by two groups—conventional growers, who target the mass market, and organic growers who target either the ‘niche urban market’ or the worldwide export market. The demand for major organic food items such as milk, meat, eggs and dairy products is growing rapidly in national urban and international markets. On the other hand, the conventional grower has a large share of both national and international markets. The book clearly differentiates between the economics of these two product and farming types. The book closely analyses why some Indian states are doing better than others and why some countries are doing better than others in Asia in organic farming. It describes the state-wise growth of the organic market in India as a result of the proactive policies and actions of states which are more successful than others. The book also presents
